Course Prefix and Number: BIO 142

Course Title: Human Anatomy and Physiology II

Course Description: Integrates anatomy and physiology of cells, tissues, organs, and systems of the human body. Integrates concepts of chemistry, physics, and pathology. Part II of II. Prerequisite: BIO 141. Lecture 3 hours. Laboratory 3 hours. Total 6 hours per week.

General Course Purpose: To prepare health science and beginning science students with a basic understanding of anatomy and physiology through the lecture and practical (laboratory) approach. The course is primarily designed for health science students and science majors.

Course Prerequisites and Co-requisites:
Prerequisite: BIO 141

Student Learning Outcomes:
Upon completing the course, the student will be able to
a. Demonstrate scientific writing and speaking;
b. Identify and describe the pathogenicity and control of microbes, as well as the Gram stain procedure;
c. Discuss the anatomy of major endocrine organs, their secretions, and the functions of the hormones that are secreted in addition to selected endocrine disorders;
d. Identify the anatomy and physiology of the circulatory system, to include the blood, heart, and blood vessels;
e. Describe the anatomy and physiology of the respiratory system;
f. Discuss the anatomy and physiology of the urinary system, to include fluid, electrolyte, and acid-base balance;
g. Describe and analyze the anatomy and physiology of the digestive system, to include nutrition and metabolism; and
h. Identify and describe the anatomy and physiology of the reproductive system, to include human development.

Major Topics to Be Included:
a. Histology
b. Human systems analysis (e.g., circulatory, digestive, respiratory, nervous, musculoskeletal, endocrine, reproductive)
c. Pathological concepts and clinical applications to human systems
d. Disease etiology

Date Created/Updated (Month, Day, Year): January 23, 2019
