

**J. Sargeant Reynolds Community College
Course Content Summary**

Course Prefix and Number: CHM 246

Credits: 2

Course Title: Organic Chemistry Laboratory II

Course Description: Introduces fundamental chemistry of carbon compounds, including structures, physical properties, syntheses, and typical reactions. Emphasizes reaction mechanisms and synthesis. Includes qualitative organic analysis. Part II of II. Prerequisite: CHM 245. Prerequisite or Co-requisite: CHM 242. Laboratory 6 hours per week.

General Course Purpose: Designed for students transferring to a four-year college or university in a science curriculum.

Course Prerequisites and Co-requisites:

Prerequisite: CHM 245

Prerequisite or Co-requisite: CHM 242

Student Learning Outcomes:

Upon completing the course, the student will be able to

- a. Describe the mechanism for reactions of the functional group(s) using equations with the appropriate (condensed or expanded) structural formulas;
- b. Recognize the influence of both kinetic and thermodynamic control of a reaction mechanism;
- c. Show the synthesis of a given compound with appropriate chemical equations; and
- d. Identify a compound using spectroscopic data gained from the following instruments:
 - Ultraviolet/visible Spectroscopy (UV/Vis)
 - Infrared Spectroscopy (IR, FTIR)
 - Nuclear Magnetic Resonance Spectroscopy (NMR)
 - Mass Spectrometry (MS)

Major Topics to Be Included:

- a. Organometallic compounds
- b. Alcohols, ethers, and epoxides
- c. Aldehydes, ketones, and nucleophilic addition to the carbonyl group
- d. Enols, enolates, and enamines
- f. Carboxylic acids
- g. Acyl transfer reactions
- h. Ester enolates, alkylamines, arylamines
- k. Aryl halides, phenols, carbohydrates

Date Created/Updated (Month, Day, Year): March 1, 2019
