Course Prefix and Number: GEO 200  
Credits: 3

Course Title: Introduction to Physical Geography

Course Description: Studies major elements of the natural environment, including earth-sun relationship, landforms, weather and climate, natural vegetation and soils. Introduces the student to types and uses of maps. Prerequisite: Placement in ENG 111 or placement in Co-requisites ENG 111 and ENF 3. Lecture 3 hours per week.

General Course Purpose: This course can be used to satisfy the Social/Behavioral Science elective for all AS and AA transfer degrees. It is also for anyone interested in learning more about physical geography.

Course Prerequisites and Co-requisites:
Prerequisite: Placement in ENG 111 or placement in Co-requisites ENG 111 and ENF 3.

Student Learning Outcomes:
Upon completing the course, the student will be able to
a. Understand the global energy budget and the role of atmospheric and oceanic circulation in redistributing solar energy;

b. Understand how climate affects the formation and distribution of landforms;

c. Understand how climate and soil types affect the distribution of life on Earth;

d. Understand the role of disturbance and natural hazards in the global ecosystem;

e. Understand and interpret complex materials;

f. Weigh evidence and decide if generalizations or conclusions based on the given data are warranted;

g. Access needed information effectively and efficiently;

h. Use logical and mathematical reasoning within the context of various disciplines; and

i. Reason by deduction, induction, and analogy.

Major Topics to Be Included:
The course will cover the patterns of physical phenomena on the Earth’s surface and the processes that create those patterns. They include:
a. Atmospheric phenomena: including Earth-sun relations, climate classification and weather phenomena

b. Hydro-spherical phenomena: including characteristics of oceans, estuaries, rivers, and lakes

c. Landforms: including the characteristics and distribution of characteristic features of the land surface

d. Soils: including the distribution of soil types

e. Bio-geographic phenomena: including patterns of plant and animal distributions and the factors that limit those distributions.

Date Created/Updated (Month, Day, and Year): January 29, 2019
